DETAILED ACTION

1. The Examiner has carefully considered Applicant's amendment and accompanying remarks filed August 18, 2003. The 112, 2nd rejections have been overcome.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Terminal Disclaimer

3. The terminal disclaimer filed on August 18, 2003 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of 6,001,437 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 103

4. Claims 10-19, 22-27, 35, 36, and 41-53 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kirk et al. (US 5,654,063) in view of Fritze et al. (US 4,372,997). Kirk et al. disclose a pressure sensitive adhesive cover comprising an intumescent material (col 4, ln 19-21). The scrim is preferably in the form of an open mesh lattice comprising fiberglass material (col 4, ln 52-54). A felted sheet (col 4, ln 67) can be used within the fiber barrier layer. The base member may be formed of plastic sheet material (col 5, ln 61-64). Kirk et al. disclose the claimed invention except for the teaching that the fabric is embedded into a polyolefin organic resin.

Fritz et al. disclose heat and flame resistant sheet material comprising glass fiber mats that are laminated to films of polypropylene to provide a moisture barrier (col 4, ln 5-8). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have

used Fritze's polypropylene film in the adhesive cover of Kirk et al., motivated by the desire to create an adhesive having a moisture barrier.

Rejection is maintained.

Response to Arguments

4. Applicant's arguments filed August 18, 2003, have been fully considered but they are not persuasive for the reasons set forth. Applicant argues that the combination of Kirk et al. and Fritze et al. would not disclose the claimed invention. This argument is not persuasive because the Examiner has equated the overlay of Kirk et al. to the polypropylene film coating of the present invention. Therefore, the combination of these references discloses a fabric, precoated with an active thermal protective material in a thermoplastic polyolefin matrix.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
